SOFTWARE ENGINEER

Dear Hiring Manager.

I am writing to apply for the Software Engineer position. As a Bachelor of Science in Information Technology student at PHINMA Education, with hands-on academic experience in web development, database management, and problem-solving, I am eager to bring my technical foundation and strong work ethic to Fraud Technology

During my studies, I developed a Student Information System Web App using HTML, CSS, JavaScript, and PHP, where I implemented CRUD operations, user authentication, and database integration. In a group project, I collaborated with four classmates to build a volunteer scheduling tool using Google Sheets and Excel for over 50 participants, which strengthened my teamwork, time management, and communication skills. These projects gave me practical experience in writing clean, maintainable code, debugging issues, and understanding user needs - skills directly relevant to a Software Engineer role.

I am proficient in Microsoft Office, Google Workspace, Python (Beginner), HTML/CSS, and Canva, and I am currently expanding my knowledge in data structures, networking, and IT project management. What interests me most about Asurion I am particularly drawn to your team's approach to building reliable and user-focused software, and I would love to contribute while learning from experienced engineers.

I am a motivated, detail-oriented, and adaptable learner who is comfortable working both independently and in a team. I am available for an internship or full-time entry-level role and am willing to undergo training and upskilling as needed.

Thank you for considering my application. I have attached my resume for your review and would be grateful for the opportunity to discuss how my skills can support your team. I

Thank you for considering my application. I would appreciate the chance to discuss how my BSIT Background, the project I have completed my willingness to learn and my interest, in

Dela Paz, Prince Lance C.

PROCESS & INTEGRITY NOTE:

PROCESS & INTEGRITY NOTE:

For my application as a Software Engineer, I searched for opportunities that match my course, BS Information Technology. I looked for openings on reputable platforms like LinkedIn, JobStreet, and the official careers pages of companies based in Angeles City and Clark. I chose [Company Name] because the role aligns with my academic projects in web development and database management.

To check the information, I verified that the job post was active and posted on the official company website, not just a reposted ad. I read the job description, required skills, and company background to make sure the posting is legitimate. I also cross-checked the company profile on LinkedIn and its official website to confirm the location and contact details.
